

APPLICATION NOTE

DATE:

December 1, 2018

SEVERITY:

Low

TOPIC: Remotely Rebooting G2

PRODUCTS AFFECTED:

G2

ACTIONS:

If you need to reboot your G2 from the firing line here's how you can do it. This has the same effect as pressing the power button. Any open strings will be lost; if they are important to you, save them with the *Finish String* button.

As user ADMIN, go to the GEARWHEEL ==> USB icon and click the **Network** button

Now log in; the username is *root* and so is the password

Hover over System then selectReboot and then click Perform Reboot

Your G2 will reboot and should be back online in about 60 seconds.
